## Section A — Subatomic Particles & Atomic Models

**Q1. Who discovered the electron?**

- A) J.J. Thomson  
B) Rutherford  
C) Chadwick  
D) Bohr

**Q2.** The charge on an electron is:

- A) Positive  
B) Negative  
C) Neutral  
D) Variable

**Q3.** The positively charged particles present in an atom are called:

- A) Electrons  
B) Neutrons  
C) Protons  
D) Nucleons

**Q4. Who discovered the neutron?**

- A) J.J. Thomson  
B) Rutherford  
C) James Chadwick  
D) Niels Bohr

**Q5.** The approximate mass of an electron compared with a proton is:

- A) Equal  
B) About  $1/1836$  of proton mass  
C) About 1836 times proton mass  
D) Twice the proton mass

**Q6.** Which subatomic particle has no electrical charge?

- A) Proton  
B) Electron  
C) Neutron  
D) Positron

**Q7.** Cathode ray experiments provided evidence for the existence of:

- A) Protons  
B) Electrons  
C) Neutrons  
D) Nuclei

**Q8.** Canal rays are also known as:

- A) Cathode rays  
B) Anode rays

- C) Gamma rays  
D) X-rays

**Q9.** Canal rays consist mainly of:

- A) Negatively charged particles  
B) Positively charged particles  
C) Neutral particles  
D) Photons

**Q10.** The charge-to-mass ratio of canal rays depends on:

- A) Only the gas used  
B) Only the electrode material  
C) The nature of the gas  
D) Temperature only

**Q11.** According to Thomson's atomic model, electrons are:

- A) Concentrated in the nucleus  
B) Embedded in a positively charged sphere  
C) Outside the atom completely  
D) Present only in shells

**Q12.** Thomson's model is commonly called the:

- A) Nuclear model  
B) Planetary model  
C) Plum pudding model  
D) Shell model

**Q13.** Rutherford's experiment involved bombarding a thin foil with:

- A) Electrons  
B) Protons  
C) Alpha particles  
D) Neutrons

**Q14.** The foil used in Rutherford's experiment was mainly made of:

- A) Copper  
B) Gold  
C) Aluminium  
D) Iron

**Q15.** Most alpha particles in Rutherford's experiment:

- A) Were reflected back  
B) Passed straight through the foil  
C) Were absorbed  
D) Changed into electrons

**Q16.** Rutherford concluded that most of the atom is:

- A) Positively charged  
B) Empty space  
C) Filled with electrons  
D) Filled with neutrons

**Q17.** The small fraction of alpha particles that were deflected strongly indicated the presence of:

- A) A large empty space
- B) A small, dense nucleus
- C) Electrons in shells
- D) Neutrons outside the atom

**Q18.** According to Rutherford's model, the nucleus contains:

- A) Only electrons
- B) Positive charge and most of the atom's mass
- C) Only neutrons
- D) Equal numbers of electrons and protons

**Q19.** A major limitation of Rutherford's model was that it could not explain:

- A) The existence of the nucleus
- B) The scattering of alpha particles
- C) The stability of atoms
- D) The existence of protons

**Q20.** According to classical physics, an electron revolving around the nucleus should:

- A) Gain mass continuously
- B) Lose energy and spiral into the nucleus
- C) Become neutral
- D) Stop moving immediately

### Section B — Bohr's Model & Electronic Configuration

**Q21.** Bohr proposed that electrons revolve around the nucleus in:

- A) Random paths
- B) Fixed energy levels or shells
- C) The nucleus itself
- D) Straight lines

**Q22.** The shells around the nucleus are represented by:

- A) A, B, C, D
- B) K, L, M, N
- C) P, Q, R, S
- D) X, Y, Z

**Q23.** The shell nearest to the nucleus is called:

- A) L-shell
- B) M-shell
- C) K-shell
- D) N-shell

**Q24.** The maximum number of electrons that can be accommodated in a shell is given by:

- A)  $n^2$
- B)  $2n$
- C)  $2n^2$
- D)  $n/2$

**Q25.** The maximum number of electrons possible in the K-shell is:

- A) 1
- B) 2
- C) 8
- D) 18

**Q26.** The maximum number of electrons possible in the L-shell is:

- A) 2
- B) 4
- C) 8
- D) 18

**Q27.** The maximum number of electrons possible in the M-shell according to the  $2n^2$  rule is:

- A) 8
- B) 18
- C) 32
- D) 2

**Q28.** The maximum number of electrons possible in the N-shell is:

- A) 18
- B) 24
- C) 32
- D) 36

**Q29.** Electrons occupy shells starting from:

- A) The outermost shell
- B) The shell with maximum capacity
- C) The shell closest to the nucleus
- D) Any shell randomly

**Q30.** The electronic configuration of carbon (atomic number 6) is:

- A) 2,4
- B) 4,2
- C) 6
- D) 2,2,2

**Q31.** The electronic configuration of oxygen (atomic number 8) is:

- A) 4,4
- B) 2,6
- C) 6,2
- D) 8

**Q32.** The electronic configuration of sodium (atomic number 11) is:

- A) 2,9
- B) 8,3
- C) 2,8,1
- D) 2,7,2

**Q33.** The electronic configuration of magnesium (atomic number 12) is:

- A) 2,8,2

**Q34.** The electronic configuration of chlorine (atomic number 17) is:

- A) 2,7,8  
B) 2,8,7  
C) 8,8,1  
D) 7,8,2

**Q35.** The electronic configuration of argon (atomic number 18) is:

- A) 2,8,8  
B) 2,7,9  
C) 8,10  
D) 2,16

**Q36.** The outermost shell of an atom is called the:

- A) Nuclear shell  
B) Valence shell  
C) Inner shell  
D) Proton shell

**Q37.** Electrons present in the outermost shell are called:

- A) Nuclear electrons  
B) Core electrons  
C) Valence electrons  
D) Free protons

**Q38.** The valence electrons in a carbon atom are:

- A) 2  
B) 4  
C) 6  
D) 8

**Q39.** The valence electrons in a chlorine atom are:

- A) 1  
B) 2  
C) 7  
D) 8

**Q40.** An atom having a completely filled outermost shell is generally:

- A) Highly reactive  
B) Chemically stable  
C) Always positively charged  
D) Always negatively charged

## Section C — Atomic Number, Mass Number & Valency

### D) Protons + neutrons

**Q42.** In a neutral atom, the number of protons is equal to the number of:

- A) Neutrons  
B) Electrons  
C) Nucleons  
D) Shells

**Q43.** Mass number is equal to:

- A) Protons – neutrons  
B) Protons + neutrons  
C) Electrons + neutrons  
D) Protons + electrons

**Q44.** An atom contains 11 protons and 12 neutrons. Its mass number is:

- A) 11  
B) 12  
C) 23  
D) 1

**Q45.** An atom has atomic number 17 and mass number 35. Number of neutrons is:

- A) 17  
B) 18  
C) 35  
D) 52

**Q46.** An atom has 15 protons and 16 neutrons. Its atomic number is:

- A) 15  
B) 16  
C) 31  
D) 1

**Q47.** An atom has mass number 40 and atomic number 20. Number of neutrons is:

- A) 20  
B) 40  
C) 60  
D) 10

**Q48.** An atom contains 8 protons, 8 neutrons and 8 electrons. Its mass number is:

- A) 8  
B) 16  
C) 24  
D) 0

**Q49.** If an atom has 13 electrons and is electrically neutral, its atomic number is:

- A) 10  
B) 12  
C) 13  
D) 26

**Q50.** Which quantity uniquely identifies an element?

- A) Number of neutrons
- B) Number of shells
- C) Atomic number
- D) Mass number

**Q51.** The valency of an element with electronic configuration 2,8,1 is:

- A) 1
- B) 2
- C) 7
- D) 8

**Q52.** The valency of an element with electronic configuration 2,8,7 is:

- A) 1
- B) 2
- C) 7
- D) 8

**Q53.** The valency of an element with electronic configuration 2,8,8 is:

- A) 0
- B) 1
- C) 2
- D) 8

**Q54.** An element having four valence electrons generally has valency:

- A) 1
- B) 2
- C) 3
- D) 4

**Q55.** The valency of oxygen is generally:

- A) 1
- B) 2
- C) 6
- D) 8

**Q56.** The valency of nitrogen in its common compounds is often:

- A) 1
- B) 2
- C) 3
- D) 7

**Q57.** An element with one valence electron tends to:

- A) Gain seven electrons
- B) Lose one electron
- C) Gain one proton
- D) Lose all neutrons

**Q58.** An element with seven valence electrons tends to:

- A) Lose seven electrons

**Q59.** The tendency of atoms to attain a stable electronic configuration is related to:

- A) Valency  
B) Atomic mass only  
C) Number of neutrons only  
D) Nuclear size only

**Q60.** Which element has zero valency in its stable state?

- A) Sodium  
B) Chlorine  
C) Neon  
D) Oxygen

### Section D — Isotopes & Isobars

**Q61.** Atoms of the same element having the same atomic number but different mass numbers are called:

- A) Isobars  
B) Isotopes  
C) Ions  
D) Isomers

**Q62.** Isotopes have the same number of:

- A) Neutrons  
B) Protons  
C) Nucleons  
D) Mass units

**Q63.** Isotopes of an element differ in their number of:

- A) Protons  
B) Electrons in neutral atoms  
C) Neutrons  
D) Atomic numbers

**Q64.** Hydrogen has how many commonly known isotopes?

- A) 1  
B) 2  
C) 3  
D) 4

**Q65.** The isotope of hydrogen containing one proton and one neutron is:

- A) Protium  
B) Deuterium  
C) Tritium  
D) Hydrogen-0

**Q66.** The isotope of hydrogen containing one proton and two neutrons is:—

- A) Protium  
B) Deuterium

Q75. Which statement about isotopes is correct?

- A) They have different atomic numbers
- B) They have identical chemical properties to a large extent
- C) They always have different valencies
- D) They are different elements

### Application & Numerical MCQs

Q76. An atom has 19 electrons and 20 neutrons. Assuming it is neutral, its mass number is:

- A) 19
- B) 20
- C) 39
- D) 40

Q77. An atom has mass number 27 and contains 13 protons. Number of neutrons is:

- A) 13
- B) 14
- C) 27
- D) 40

Q78. An atom has 16 protons and 18 neutrons. Its atomic number and mass number respectively are:

- A) 16 and 18
- B) 18 and 16
- C) 16 and 34
- D) 34 and 16

Q79. An element has electronic configuration 2,8,3. Its atomic number is:

- A) 3
- B) 10
- C) 13
- D) 18

Q80. An element has electronic configuration 2,8,6. The number of electrons it needs to complete its outermost shell is:

- A) 1
- B) 2
- C) 6
- D) 8

Q81. An atom has 2 electrons in K-shell and 8 electrons in L-shell. Its atomic number is:

- A) 2
- B) 8
- C) 10
- D) 12

Q82. An element has atomic number 14. Its electronic configuration is:

- A) 2,12
- B) 8,6
- C) 2,8,4
- D) 4,10

**Q83.** An element has atomic number 15. The number of valence electrons is:

- A) 3
- B) 4
- C) 5
- D) 8

**Q84.** An element has atomic number 9. Its valency is:

- A) 1
- B) 2
- C) 7
- D) 9

**Q85.** An element has atomic number 12. It is expected to have valency:

- A) 1
- B) 2
- C) 6
- D) 8

**Q86.** If an atom loses two electrons, it becomes:

- A) A neutral atom
- B) A negatively charged ion
- C) A positively charged ion
- D) A neutron

**Q87.** If an atom gains one electron, it becomes:

- A) A positively charged ion
- B) A negatively charged ion
- C) A neutron
- D) A proton

**Q88.** An atom has 17 protons and 18 electrons. Its net charge is:

- A) +1
- B) -1
- C) 0
- D) +2

**Q89.** An ion has 11 protons and 10 electrons. Its charge is:

- A) -1
- B) +1
- C) +2
- D) 0

**Q90.** An ion has 8 protons and 10 electrons. Its charge is:

- A) +2
- B) -2
- C) +1
- D) 0

## Higher-Level & Tricky MCQs

**Q91.** Which statement correctly compares a proton and neutron?

- A) Both have negative charge
- B) Proton is positively charged while neutron is neutral
- C) Proton is neutral while neutron is positive
- D) Both are negatively charged

**Q92.** Which particles are collectively called nucleons?

- A) Electrons and protons
- B) Protons and neutrons
- C) Electrons and neutrons
- D) Only protons

**Q93.** Most of the mass of an atom is concentrated in the:

- A) Electron cloud
- B) Nucleus
- C) Outer shell
- D) Valence shell

**Q94.** If an atom has 8 protons and 10 neutrons, which statement is correct?

- A) Atomic number = 10, mass number = 18
- B) Atomic number = 8, mass number = 18
- C) Atomic number = 18, mass number = 8
- D) Atomic number = 8, mass number = 10

**Q95.** Two atoms have atomic numbers 17 and 18 but both have mass number 40. They are:

- A) Isotopes
- B) Isobars
- C) Ions
- D) Isomers

**Q96.** An element has four shells with electrons arranged as 2,8,8,2. Which statement is correct?

- A) Atomic number is 18
- B) Atomic number is 20
- C) Valency is 8
- D) It has no valence electrons

**Q97.** Which change does NOT change the identity of an element?

- A) Change in number of protons
- B) Change in atomic number
- C) Change in number of neutrons
- D) Change from one element to another

**Q98.** An atom of an element has 6 protons and 7 neutrons. Another atom has 6 protons and 8 neutrons. These two atoms are:

- A) Isobars
- B) Isotopes
- C) Different elements
- D) Ions of different elements

**Q99.** Which observation from Rutherford's experiment was most unexpected according to the plum pudding model?

- A) Most particles passed through
- B) A few alpha particles were deflected through large angles
- C) Alpha particles were positively charged
- D) Gold is a metal

**Q100.** An element X has atomic number 17 and element Y has atomic number 11. Which statement is correct?

- A) X has electronic configuration 2,8,7 and Y has 2,8,1
- B) X has valency 7 and Y has valency 8
- C) Both X and Y have completely filled outermost shells
- D) X tends to lose one electron while Y tends to gain one electron
